

1. Main Template — `announcementbar.tpl`

Path: `/templates/hostx/includes/announcementbar.tpl`

This is a self-contained Smarty template with embedded CSS (no external dependencies). It creates a duplicated message track so the CSS `@keyframes scroll` appears infinitely seamless — no gaps, no jumps.

Key features included:

- **Pure CSS animation** using `@keyframes translateX(-50%)`
- **Seamless loop** via duplicated content inside the flex track
- **Pause on hover** via `animation-play-state: paused`
- **Clickable messages** when `url` is provided
- **Optional icons** (Font Awesome) and external link support
- **Responsive** breakpoints for mobile, tablet, desktop
- **Accessible:** `prefers-reduced-motion` disables animation for users who need it
- **Z-index 1040** ensures it sits above the Bootstrap navbar

2. Header Integration

Add this directly after the `<body>` tag in `header.tpl`, before your navbar:

Smarty Copy

```
{assign var="announcements" value=[
  ['text'=>'🔥 NVMe SSD VPS Plans now available!', 'url'=>'/cart.php?gid=12',
  'icon'=>'fas fa-bolt'],
  ['text'=>'🔥 24/7 Live Chat Support', 'url'=>'/support.php', 'icon'=>'fas
fa-comments'],
  ['text'=>'🔥 Free SSL with every hosting plan', 'url'=>'/ssl-
certificates.php', 'icon'=>'fas fa-lock'],
  ['text'=>'🔥 Summer Sale: 30% OFF — Use code SUMMER30',
'url'=>'/cart.php?promocode=SUMMER30', 'icon'=>'fas fa-tag']
]}
{include file="includes/announcementbar.tpl"}
```

For dynamic content from a WHMCS hook, simply assign the array and include:

Smarty Copy

```
{assign var="announcements" value=$announcementBarMessages|default:[]}
{include file="includes/announcementbar.tpl"}
```

3. Example Smarty Array Structures

Table

Field	Required	Description
text	Yes	The message to display
url	No	Makes the item a clickable link
icon	No	Font Awesome class (e.g. fas fa-bolt)
external	No	Set true to open in a new tab

Simple text messages: Smarty Copy

```
{assign var="announcements" value=[
  ['text'=>'Welcome to HostX – Trusted hosting since 2010'],
  ['text'=>'Free migration assistance included'],
  ['text'=>'99.9% Uptime SLA guaranteed']
]}
```

With internal links + icons: Smarty Copy

```
{assign var="announcements" value=[
  ['text'=>'New Data Center in Singapore', 'url'=>'/datacenters.php',
  'icon'=>'fas fa-globe-asia'],
  ['text'=>'cPanel License $15/month', 'url'=>'/cart.php?gid=5', 'icon'=>'fas
fa-cube'],
  ['text'=>'DDoS Protection included free', 'url'=>'/ddos-protection.php',
  'icon'=>'fas fa-shield-alt']
]}
```

External link: Smarty Copy

```
['text'=>'Join our Affiliate Program', 'url'=>'https://affiliates.example.com',
'icon'=>'fas fa-hand-holding-usd', 'external'=>true]
```

4. Optional External CSS

If you prefer keeping CSS out of the template, I've also generated a standalone stylesheet at `/templates/hostx/css/announcementbar.css`. To use it:

1. Remove the `<style>` block from `announcementbar.tpl`
2. Link the CSS in `header.tpl`:

HTML: Preview Copy

```
<link rel="stylesheet"
href="{ $WEB_ROOT }/templates/{ $template }/css/announcementbar.css ">
```
